WHAT SSE DELIVERS

SSE increases post-assault exploitation efficiency through a unified exploitation platform that enables operators to rapidly capture, document, attribute, and process enemy captured materials through a structured, systematic digital workflow. Real-time documentation and dissemination facilitate on-target exploitation, reducing time on the objective while accelerating the delivery of actionable intelligence to follow-on forces and higher headquarters.

C-01

On-objective capture

Structured collection of media, documents, biometrics, and evidence with cryptographically preserved provenance from the moment of acquisition.

C-02

Operator-grade triage

Field workflows that surface priority artifacts and exploitable leads in real time, reducing time on target and preserving combat power.

C-03

Analyst-ready output

Automated, editable reports, entity graphs, and multi-format exports that downstream intelligence consumers and case management systems can immediately use.

SHERPA 6 • SOLUTION • EXPLOITATION // INTEL

sse.

End-to-end Sensitive Site Exploitation — capture, triage, exploit, and report from objective to analyst.

OVERVIEW

SSE compresses the time between objective and intelligence products. Capture media, documents, biometrics, and pocket litter on-objective with structured metadata and tamper-evident chain-of-custody. Triage and exploit with operator-grade tools. Graph artifacts, relationships, and events. Disseminate authoritative reporting to commanders, analysts, and prosecutors - without losing fidelity between the operator and the analyst.

CAPABILITY INDEX

C-01 On-Objective Capture

Mobile collection of photos, video, documents, biometrics, and pocket litter with automatic structured metadata, geolocation, timestamps, operator ID, and cryptographic hashing.

C-03 Biometric Enrollment

Multi-modal biometric capture (fingerprint, facial, iris, palm, voiceprint) with matching against local or reach-back watchlists at the tactical edge.

C-05 Link Analysis

Entity, relationship, and event graphing across captured artifacts and reach-back data to rapidly expose networks and patterns.

C-02 Triage & Tagging

Field triage workflows for prioritizing high-value evidence and personnel. Pin, flag, and propagate critical items to command and debrief products in real time.

C-04 Forensic Exploitation

Document, media, and device exploitation pipelines with full chain-of-custody preservation, object detection, and automated descriptions.

C-06 Reporting & Dissemination

Automated generation of court-admissible reports, debrief slides, and CSV exports with embedded provenance and audit trails for immediate ingestion by intelligence and case management systems.

Off the X faster. Intel sooner. Combat power preserved.
